

Responsible Down Standard Celebrates First Anniversary

On the first anniversary of the standard, more than 100 million birds fall under RDS certification and RDS 2.0 is released for public comment

Through a global certification standard, the adidas Group, Black Diamond, Kathmandu, NAU, REI and Timberland join the effort to help ensure humane treatment of animals used for down products.

Salt Lake City, UTAH – OUTDOOR RETAILER TRADESHOW – January 21, 2015—[Textile Exchange](#) (TE) today announced the addition of the adidas Group, Black Diamond, Kathmandu (NZ), NAU, REI and Timberland to a growing roster of global brands committed to its Responsible Down Standard (RDS). On Jan. 19, the organization also celebrated the release of RDS 2.0 for public comment.

Officially launched in January 2014, the RDS is the most comprehensive, global, third-party certified animal welfare and traceability standard for down and feathers available for use by any company. The RDS, released in January 2014 with the first certificate issued in June 2014, is now working with more than 350 farms that are raising more than 100 million birds.

“The many brands and companies that have signed on to RDS deserve credit for their commitment. I’m proud of the scale that we have achieved with the RDS, and the incredible energy that our International Working Group has put into the revision,” said Anne Gillespie, Director of Industry Integrity, Textile Exchange. “We anticipate further strong growth, particularly as we move into the home and bedding markets. Our goal is to protect the welfare of as many ducks and geese as possible.”

[The adidas Group](#), [Black Diamond](#), [Kathmandu \(NZ\)](#), [NAU](#), [REI](#) and [Timberland](#) join an already strong list of global brands committed to bringing certified, responsible down to market including [The North Face](#), [Down & Feather Co.](#), [DownLinens](#), [Eddie Bauer](#), [H&M](#), [Helly Hansen](#), [Mammut](#), [Marmot](#), and [Outdoor Research](#).

Since becoming the owner of the RDS, Textile Exchange has driven an open revision process to bring in broad stakeholder input. Working closely with brands, suppliers, industry organizations and animal welfare groups such as Humane Society International, RDS 2.0 was released for public comment on Jan. 19. In particular, the animal welfare group Four Paws has been a strong and positive contributor to the development of the standard, ensuring that the RDS addresses the full spectrum of interests. The revised standard includes an optional Parent Farm module for companies looking to go beyond the direct sources of their down, eliminates any parallel production of certified and non-certified waterfowl at the farm level, further strengthens the animal welfare criteria and auditing requirements and increases the strictness of product labeling by only allowing labeling of 100 percent RDS products.

Down and feathers are sourced from waterfowl raised for food. There is an inevitable risk of animal welfare issues with the use of farm animals for industrial purposes. The primary mandate of the RDS is to prevent practices such as force-feeding and live-plucking as well as provide strict requirements on issues such as food and water quality, housing, stock density and outdoor access, animal health, hygiene and pest and predator control, among others, all supported with traceability through to the final product.

"The first year of the RDS was a tremendous success and we are proud to have contributed to the improvement of the lives of so many animals in the down supply chain," said Adam Mott, Director of Sustainability, The North Face. "We are excited to see such rapid adoption of the standard through the commitment of brands and suppliers inside and outside of our industry. The update of the RDS will strengthen an already effective, successful standard and we commend Textile Exchange for their tireless work in leading the way."

About the Responsible Down Standard

The RDS is the most comprehensive, global, third-party certified animal welfare and traceability standard for down and feathers. Down, which comes from geese and ducks that are grown for the food industry, remains one of the highest quality, best performing materials for use in apparel, bedding and home goods. In late 2012, The North Face combined forces with Textile Exchange and Control Union Certifications to create and implement the RDS across primary sourcing regions in Europe, Asia and the U.S. This included working closely with leading suppliers Allied Feather & Down and Downlite to analyze and certify every step of the down supply chain. Upon completion of the standard, The North Face gifted it to Textile Exchange. TE owns a number of standards including the Organic Content Standard, the Recycled Claim Standard, the Global Recycled Standard and the Content Claim Standard. As a standards owner, Textile Exchange ensures access, quality and continuous improvement.

The revised standard is now open for a 30-day public comment period ending Feb. 19. Textile Exchange welcomes input from all interested parties. Please see www.responsibledown.org for further information.

About Textile Exchange

Textile Exchange is a membership-based non-profit dedicated to accelerating sustainable practices in the textile industry. We envision a textile industry that protects and restores the environment and enhances lives. The Industry Integrity team's work in standards and certification is foundational to the work of Textile Exchange. Other TE standards include the Content Claim Standard, Organic Content Standard, Recycled Claim Standard and Global Recycled Standard.
